

Join us for **FREE**  
family caregiver  
virtual reality (VR)  
experiences from  
**Embodied Labs!**

Embodiment a first-person  
perspective of someone  
living with:

- Alzheimer's disease
- Dementia
- Vision & hearing loss
- Hospice care

# TRANSFORM THE WAY YOU CARE

When you step into the shoes of the people you assist or care for, you become aware of their emotions, cognitive or sensory deficiencies - an experience that no textbooks, readings that describe symptoms, or hours of simulations can equal.

Embodied Labs adds a unique dimension to the prism of perspective that is transformational for teams across organizations and industries.

Our first-person immersive experiences nurture actionable empathy, which results in a culture of care.
